

eprovisionTM

Efficient Contracting

Do you wish to...

- Have a centralized repository of contracts
- Standardize contracting language
- Relieve contract managers from wading through a mass of e-mails and Word documents to stay on top of an extended negotiation
- Minimize manual follow ups between the provider relations, legal and financial departments
- Avoid the additional cost incurred due to delayed renewal of provider contracts
- Free the provider relations staff from clarifying claims issues so they can focus on provider relations

Welcome to eprovision

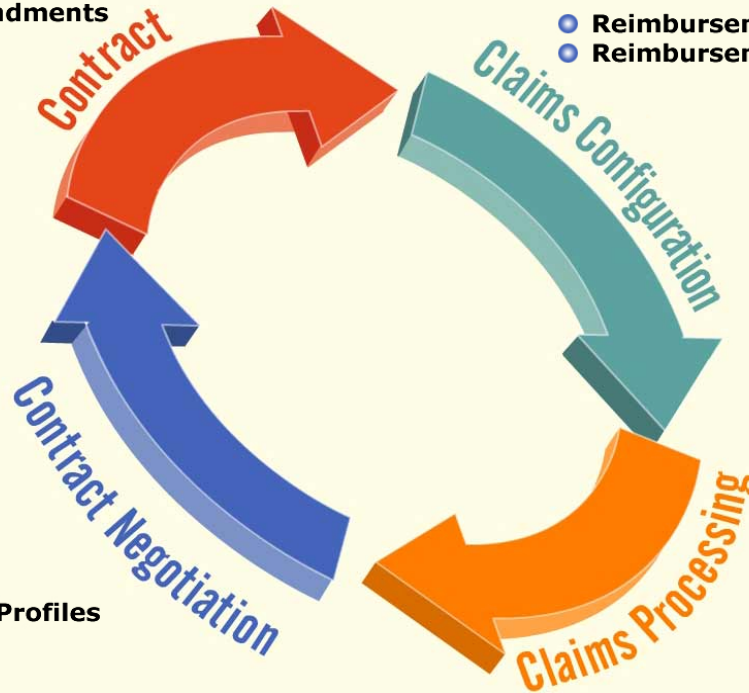

eprovision is a comprehensive contract management system and workflow solution for payor organizations. With eprovision you can:

- Create templates and enforce contracting standards
- Create and publish a library of legal clauses and rate tables
- Process contracts in batches for large number of providers
- Ensure proper usage of contracts through the use of checklists
- Comprehensively track extended negotiations
- Keep track of scheduled events and minute all meetings
- Automate the contract approval workflow
- Version and annotate contracts
- Publish reports of contracting performance
- Manage provider database including support for National Provider ID
- Work with familiar tools like Excel and Word to edit contracts without leaving the browser
- Use a simple and uniform paradigm to contract across all provider types
- Configure claims system directly from your contracts

eprovision

Typical eprovision managed contracting process

Technology

security

eprovision uses authentication, authorization, and SSL for data over the internet.

standards compliance

eprovision supports J2EE-compliant implementations from IBM, BEA, JBoss and database products from IBM (DB2), Oracle, Microsoft (SQL Server).

standard data exchange format

The Data Interfacing Engine uses XML, CSV as data exchange format.

high availability

eprovision has been designed for 24x7 availability with hot configuration capabilities and failover mechanisms.

performance

Performance has been factored into every aspect of the architecture resulting in excellent response times.

robust design

eprovision has an N-tier architecture that permits reliable evolution of the product.

What experts say

"The Product is excellent...it is much easier to use and faster too...the batching is wonderful."

Network Manager, United Healthcare

"The product has a lot of good components. IMPRESSIVE.... particularly with the library of terms and clauses. Breaking the tasks down (as in eprovision), sending a contract off for approval, sending ten off for approval at the same time...you can see the status so easily."

Contracting Manager, CIGNA

"You seem to have thought of everything we need. Versioning... that's cool. Yes we need to have the contracts in a central database even if in Word... you do that... that's great. We need everything you've shown us so far."

Director of Provider Relations, A Minnesota PPO

"You have taken care of contracting language and rates. Its great to have templates in the application. This is a great organizational tool."

Contract Manager, Humana
